What is TransMaS?

If managing your transport operation means juggling multiple spreadsheets, endless paperwork, and a flurry of WhatsApp messages, you're not alone. But there's a better way.

TransMaS, our Transport Management System, eliminates the chaos by bringing your core operation into one integrated system that handles everything from planning to invoicing.

- Multiple spreadsheets become an **easy-to-use planning screen**.
- Paper POD filing becomes **digital documents, instantly searchable**.
- Weekend invoicing becomes **same-day billing with automatic ePODs**.
- Manual bulk order tracking becomes **powerful drawdown management**.

Smart transport management for your business

TransMaS is an all-in-one solution that's easy to learn for new users yet provides extensive analytics for those who need more detail. With a **mobile app** and **24/7 access** from anywhere, this single platform helps you manage every step, from creating an order to invoicing.

Transport is a complex business, which is why TransMaS includes features like **Driver Rosters** and **Absence planning** built into your scheduling screens, making it easier to manage your team.

Built for your business

Developed in partnership with hauliers for over 15 years, our system is designed to fit your business needs, whether you run a small local fleet or manage large-scale operations, and across all sectors from bulk haulage to abnormal loads and general freight. We offer **personalised UK support**, and flexible, pay-as-you-go pricing with no long-term contracts. You have enough to worry about, so don't let your software add to your stress.

Your cloud based TMS

Go digital and paperless with confidence. Our secure cloud-based platform is designed to connect everyone on your team—from **planners to drivers and subcontractors**. The platform is accessible anywhere, and a dedicated mobile app helps your drivers send and receive real-time updates.

Powerful features that save you time and money:

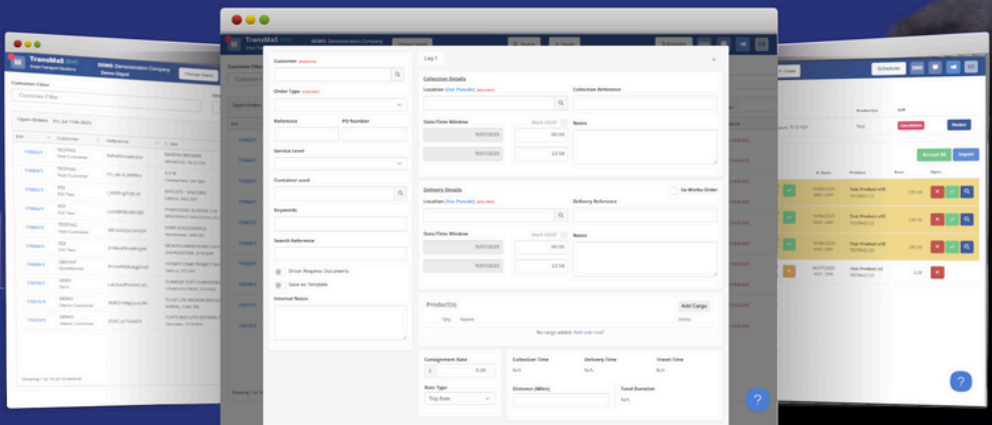

- **Automatic POD attachment to invoices** helps reduce customer phone calls and speed up payments.
- **Streamlined subcontractor management** allows you to easily set their rates and automatically send job details, saving you hours of administrative work.
- **Stay compliant** by automatically tracking **key expiry dates** for vehicles, trailers, and drivers—including MOTs, CPCs, and any other custom expiry date you need to monitor.

Manage jobs with ease

TransMaS has been designed to give your entire team complete control over all incoming and outgoing jobs. Whether you work with your own fleet or with subcontractors, our system keeps everyone informed.

- **Flexible Order Creation:** You can create new orders manually, use EDI import, or even receive them automatically if your customer also uses TransMaS.
- **Complete Visibility:** Orders automatically drop into a live diary view so planners can monitor every job in real-time.
- **Customizable Charges:** Easily add custom surcharges, pre-set customer rates, or fuel surcharges to orders to ensure all your costs are covered.
- **Intuitive Search:** Our robust search tool allows you to find any order by any field, such as customer, date, or status, ensuring nothing ever gets missed.

Stop juggling spreadsheets and manual lists for high-quantity jobs. Simply create a bulk order in TransMaS and our **drawdown system** will handle the details, keeping you informed of how much is left. This unique feature helps you manage your most complex jobs with ease.

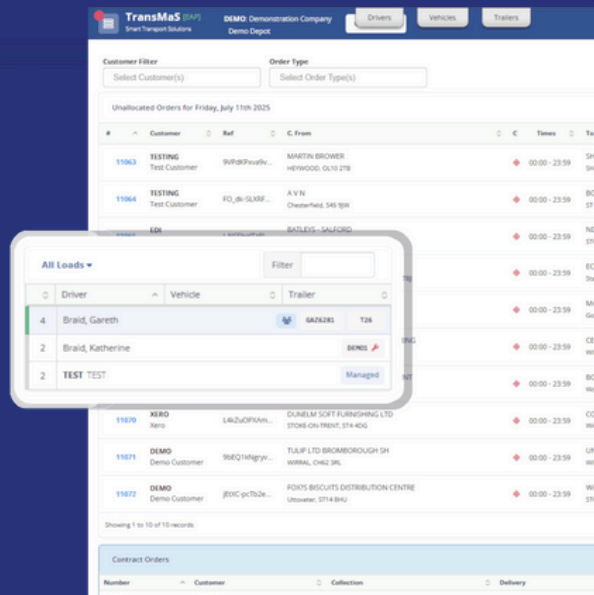

Give your customers the power to manage their own deliveries with the included TransMaS customer portal. This easy-to-use platform allows for **online booking, real-time status updates, instant POD access, and delivery notifications**. All of this can help to reduce customer service calls, giving your team more time to focus on your core business.

Real-time scheduler

Our real-time scheduler is the central hub of your operation, making it easier than ever to manage your jobs. Plan your work in seconds thanks to our intuitive scheduler that allows **drag and drop directly onto a driver** (or contractor) of your choice.

- **Real-time updates:** The system provides constant updates from both the back-office and mobile apps, monitoring live driver statuses and keeping your planning screen up-to-date.
- **Complete visibility:** You'll have full visibility of all available drivers for a selected day, and you can see when a vehicle is due for an MOT, when a driver's tachograph card is about to expire, or whether a walkaround check has been completed.
- **Easy subcontractor management:** Plan subcontractor work just like your own drivers and get live updates on their location and estimated arrival times.

Monitor all the data

We designed our scheduler to be the most useful tool for your entire operation. It goes beyond just showing you available work and drivers—it gives you all the information you need to make **quick, informed decisions** and stay ahead of your day.

Subcontractors: When working with subcontractors, things can get complicated quickly. In TransMaS, you can plan their work just like your in-house drivers. Once planned, you can set the rate you wish to pay them, and **automatically send them instructions on all of the details of the job.**

Driver app: Using our real-time systems with the mobile apps we can inform you when a driver is on site or has departed, while showing you their live status.

Expiry dates: Is a vehicle due in for MOT? No problem! Is a driver's tachograph card due to expire? That's there too! Want to check if a driver has done his walkaround check? We have you covered.

Integrations: We integrate with various maintenance and fleet tracking providers to obtain real world data on where your vehicles are and their job mileage in real-time to give you even more accurate data to review.

Invoice customers quickly and seamlessly

Cashflow is king to all companies, but transport can notice it extremely keenly. With TransMaS you can invoice your customers at the click of a button, within seconds of goods being delivered.

With our live sales dashboard, you can always be in control of what is outstanding, and what is ready to invoice. Add customer surcharges and fuel surcharges to orders to make sure all of your charges are covered.

Add to that the ability to automatically email your customer invoices with **PODs attached** and customers have no reason to delay that all-important payment.

Integrate directly with your accounts system

TransMaS integrates with the major accounting systems to provide you with invoices in your accounts package completely automatically.

We have integrations with Sage, Xero, QuickBooks and more—contact us to find out if we support your package.

Mobile App

Our TransMaS driver app gives everything your driver needs right at their fingertips. Drivers can view a clear list of their duties for the day, from collection and delivery points to vehicle changes, so they always know what's next.

Built-in scanning

Record **electronic signatures and ePOD's**, or even take photos of any on-site activity. The app instantly sends this information back to the office, reducing paperwork and saving your drivers time.

Driver location and ETA's

The app automatically sends your arrival and departure times back to the main system. This helps the office stay informed on when your drivers are on site and reduces the need for constant phone calls.

Driver Management

At the core of any operation are the drivers of your fleet. With our powerful **Driver Roster**, you can instantly see who is on shift and any absences coming up from one easy to use screen.

We'll **automatically show you who is available for a specific day**, making it easy to add extra shifts for overtime or record holidays and sick days to get a complete picture of your fleet.

Record your drivers' **expiry dates**, and we'll show timely alerts right on the planning screen.

Document Storage & Generation

Scan and store order documents and delivery notes, all in one place. Give your customer peace of mind with detailed PODs that are available as soon as they are generated.

Generate ePODs

Go paperless with our **automatic ePOD generation**. When using our mobile app, when a driver (or contractor) leaves site we can generate an electronic POD for you to use either internally or to send automatically to your customer.

Easy uploads

Store your manual paperwork in TransMaS with ease. Simply **email us a batch of paperwork** and it will appear in your account ready to allocate. Alternatively, receive PODs directly through our document scanner built into the mobile app so your drivers can send you the documents on the go.

Waste transfer notes

Transporting waste? Let us **generate the WTN for you**. This can then be automatically sent to your customer and delivery point the minute the driver leaves site. A copy is saved in your account for your use.
